

Test Scenario

A user logs in for the first time and registers him immediately. Then he wants to create a group of 5 people. In this group he also creates 2 activities. One of them is on 22.12.18 at 1 pm and the other one is on 31.12.18 at midnight. However, he notices that he has invited a wrong person. He wants to delete this person from the group. This also works. He also notices that the activity 2 (31.12.18) has a wrong time (4 pm), so he wants to edit it to set it to midnight.

For the 22.12.18 he wants to enter who wants to pay what and who owes what to which person. He almost succeeds in this. However, he is made aware by another person that he has entered something wrong. He typed in instead of +30 € - 30 €. He changes it afterwards. One day before the 22.12.18 he gets a notification that on the next day is a planned activity as well as few hours before. On 23.12.18 he gets an invitation to a new group to which he does not want to join and he refuses this invitation. *No matter whether logged in or not.*

Persona

Name: Sebastian

Gender: male

Age: 23

He's a student of computer science. He travels a lot with friends. He likes to go with them to restaurants or bars or to the cinema or to some events. However it always annoys him to calculate everything on the spot and to always plan the activities in the course of the chat, because 100+ messages are generated quickly. So he looks for an App where he can accommodate all this without great effort and also very clearly.
